
Stressed Manobo

Assignment 1:

- | | |
|----------------------------|------------------------------|
| (a) men'gabat or me'ngabat | (e) 'tadon |
| (b) mig'basa or mi'gbasa | (f) beleg'kong or bele'gkong |
| (c) i'selem | (g) 'mola |
| (d) be'nal | (h) me'daet |

Assignment 2:

The syllables are determined as follows:

- Each syllable contains exactly one vowel.
- Any consonants before the vowel may be a part of the syllable. Consonants after the vowel are part of the syllable only if it is the last syllable in the word. (0 points)

The stressed syllable is always one of the last two syllables in the word. Award points even if the stress rules make it clear that stress is only possible on one of the last two syllables.

The stressed syllable is determined as follows:

- If the vowel in both the last two syllables is not e, then the stress is on the penultimate syllable.
- If the vowel in both the last two syllables is e, then the stress is on the penultimate syllable.
- If the penultimate syllable has the vowel e and the final syllable has a vowel which is not e, then stress is on the final syllable.
- If the penultimate syllable has a vowel which is not e and the final syllable has the vowel e, then stress is on the penultimate syllable.
