

Problem #4 (20 points). Given are Old Indic word stems which are thought to preserve the most ancient (Indo-European) position of the stress. They are divided into root and suffix by a hyphen. The stressed vowel bears the mark ˘.

<i>vṛk-a-</i>	wolf	<i>vádh-ri-</i>	castrated	<i>púr-va-</i>	first
<i>vadh-á-</i>	deadly weapon	<i>dhū-má-</i>	smoke	<i>bhṛm-i-</i>	mobile
<i>sād-á-</i>	sitting on horseback	<i>dṛ-ti-</i>	leather bag	<i>kṛṣ-í-</i>	tillage
<i>puṣ-ṭi-</i>	prosperity	<i>ghṛ-ṇi-</i>	heat	<i>stó-ma-</i>	hymn
<i>sik-tí-</i>	effusion	<i>ghṛ-ṇá-</i>	heat	<i>dar-má-</i>	demolisher
<i>pī-tí-</i>	drinking, draught	<i>kā-ma-</i>	desire	<i>nag-ná-</i>	naked
<i>gá-ti-</i>	walk			<i>vák-va-</i>	rolling

(a) Explain why it is not possible to use these data to determine the placement of the stress of the following stems: *bhāg-a-* ‘share’, *pad-a-* ‘step’, *pat-i-* ‘lord’, *us-ri-* ‘morning light’.

(b) Indicate the stress of the word stems given below:

<i>mrdh-ra-</i>	foe	<i>tan-ti-</i>	cord	<i>svap-na-</i>	sleep	<i>abh-ra-</i>	cloud
<i>phe-na-</i>	foam	<i>bhār-a-</i>	burden	<i>bhū-mi-</i>	earth, soil	<i>ghan-a-</i>	killing
<i>stu-ti-</i>	praise	<i>dū-ta-</i>	messenger	<i>ghar-ma-</i>	heat	<i>ghṛṣ-vi-</i>	exuberant

△ *h* indicates that the preceding consonant is aspirated (pronounced with a puff of air); *ṇ*, *ṣ* and *ṭ* ≈ *n*, *sh* and *t* in *barn*, *marsh* and *art*, uttered with the tip of the tongue turned back; *ṛ* is a vowel similar to the middle sound in American English *bird*. The mark ˉ denotes vowel length.
