

Problem 6.

Solution:

A. The pattern of errors:

The child is using a verb in the sense of its causative counterpart. So, X causes Y to V (V= do something/ do something to A), then the child wrongly uses V in its causative sense too, giving the sentences as X V-s Y.

Explanation for the pattern: The child seems not to have yet acquired a distinction between the verb and the causative form of the verb.

B.

a. The child shows following pattern in pronunciation-

1. All the non-stops (i.e. fricatives & laterals) are replaced by alveolar stops 't' and 'd' depending on their position within the syllable.
2. Within a syllable, the consonants occurring before a vowel have to be voiced and those occurring after a vowel are unvoiced, except for nasals.

The child maintains this pattern in the following manner-

1. If a voiced stop precedes the vowel, it is retained.
2. If a voiceless stop precedes the vowel, it is voiced.
3. Any voiceless or voiced non-stop preceding a vowel is replaced by 'd'.
4. If a nasal follows a vowel, it is retained.
5. If a voiceless non-nasal stop follows a vowel, it is retained.
6. If a voiced non-nasal stop follows a vowel, it is devoiced.
7. Any non-stop that follows a vowel is replaced by 't'
