

Problem 3.

1. This kinship system is highly focused on the idea of cross-cousins (CC, i.e., mother's brother's child or father's sister's child).
2. **X jua Y** = Y's X
3. Base words:

mwanache = *child*

– **mwanache ŵandu** = *son*

– **mwanache ŵakongwe** = *daughter*

atati = *father*

amao = *mother*

acimweni = *brother*

cemwali = *sister*

ambuje = *grandparent*

yisikulu = *grandchild*

4. One parent's same-sex sibling is equivalent to the other parent's opposite-sex cross-cousin and vice versa.

	same-sex S	opposite-sex CC	opposite-sex S	same-sex CC
my _{female} ...	cemwali	asiwani	acimweni	asiwani
my mother's...	amao	atati	akwelume	atati ŵakongwe
my father's...	atati	amao	atati ŵakongwe	akwelume

5. The meaning of *brother*, *sister*, and *cross-cousin* are strictly derived from those above (i.e., my mom's or dad's daughter is my *sister* and my mom's or dad's son is my *brother*).

	<i>son</i>	<i>daughter</i>
my atati's my amao's	acimweni	cemwali
my akwelume's my atati ŵakongwe's	asiwani	

6. Finally, my child is also my opposite-sex CC's child.

(a)

- | | | |
|------------------------------|-----------------------|------------------------------------|
| (1) — ambuje | (5) — cemwali | (9) — mwanache (ŵandu) |
| (2) — amao | (6) — acimweni | (10) — mwanache (ŵakongwe) |
| (3) — atati ŵakongwe | (7) — acimweni | (11) — mwanache (ŵandu) |
| (4) — atati | (8) — acimweni | |

(b)

- | | | | |
|-------------------------------|------------------------|------------------------|------------------------|
| (12) — ambuje | (17) — atati | (22) — acimweni | (27) — asiwani |
| (13) — ambuje | (18) — akwelume | (23) — cemwali | (28) — asiwani |
| (14) — akwelume | (19) — amao | (24) — asiwani | (29) — acimweni |
| (15) — amao | (20) — asiwani | (25) — asiwani | (30) — cemwali |
| (16) — atati ŵakongwe | (21) — asiwani | (26) — acimweni | |
